

Valhall officially launch offtake arrangements for MWsize renewable energy projects.

Valhall is delighted to announce that we are now offering offtake arrangements for all mega-size renewable energy projects in Japan.

After an initial phase, we have been able to confirm that our operations are running smoothly, and we are open to engage with further clients in the Japanese market. Having confirmed our operational capabilities in the Japanese market, we registered as an Energy Resource Aggregation Business Operator earlier this year.

During our initial phase, Valhall has engaged with a group of selected customers. We would very much like to thank them for their trust in Valhall and for the pleasant co-operation.

By now, Valhall is managing over 300MW in 8 out of 9 TSO areas. We are looking forward to engaging with all mega-size renewable energy projects, such as Wind, Hydro, and Solar in any TSO area to see how a collaboration with Valhall will increase their income.

We are very humbled by the trust that we received from our customers. Each of our customers is unbelievably valuable to us. Together with all our customers, we are supporting the development the electricity market and the Japanese society by integrating renewable energy into everyday life.
